

Simple Plasticine People without large amounts of Armitage wire

Take a ball of plasticine that fits nicely inside you Palm.

Warm it up by kneading together

The break of the top $\frac{1}{4}$ to create a large and small sized ball.

Set the smaller ball aside.

Roll the larger piece into a cylinder.

Using your thumb and finger squeeze the top and bottom of the cylinder to create two thumb indents.

Slowly and carefully tear through the middle of the indents to create the letter H.

This will begin the formation of the legs and arms

Keep working the plasticine to form more sturdy arms and legs out of the 4 corner sections.

Keep the legs shorty and stumpy as this will be needed to hold the figure up and give it rigidity.

Smooth the rest of the body and make sure the plasticine is nicely moulded together.

Set aside and roll the smaller piece into a ball.

If incline contour the ball into the shape of a face, with nose, mouth and Eye sockets

Insert a small piece of wire into the head and use it to join onto the body.

This will allow freedom of head movement, without it falling off.

Not quite Morph, but still cute.

Add eyes, nose, mouth etc to suite your taste.
